21st Century

In the last 10 minutes we generated more data than from prehistoric times until 2003!

The four V's of Big Data

Data does not have to be "Big" to be challenging!

Need for data scientists!

- Data science aims to collect, analyze, and interpret data from a variety of sources (social interaction, business processes, cyber-physical systems).
- To turn data into actionable information, a comprehensive understanding of the context of the data and the ability to mine and visualize large amounts of data are essential.

generic data science
question 1/4

**What
happened?**

**Why did it
happen?**

**What will
happen?**

**What is the
best that can
happen?**

Why do patients have to wait so long?

Do doctors follow the guidelines?

Can we predict waiting times?

How much staff is needed tomorrow?

How can we reduce costs?

A man with light brown hair, wearing a black suit jacket over a pink shirt, stands with his arms crossed in front of a large, yellow medical X-ray machine. The machine has a large circular gantry and a patient bed. The background is a bright yellow wall. Five white rounded rectangular boxes with blue borders contain questions in blue text. The overall scene is brightly lit with a yellow tint.

How are X-ray machines really used?

Can we predict that the machine will break down next week?

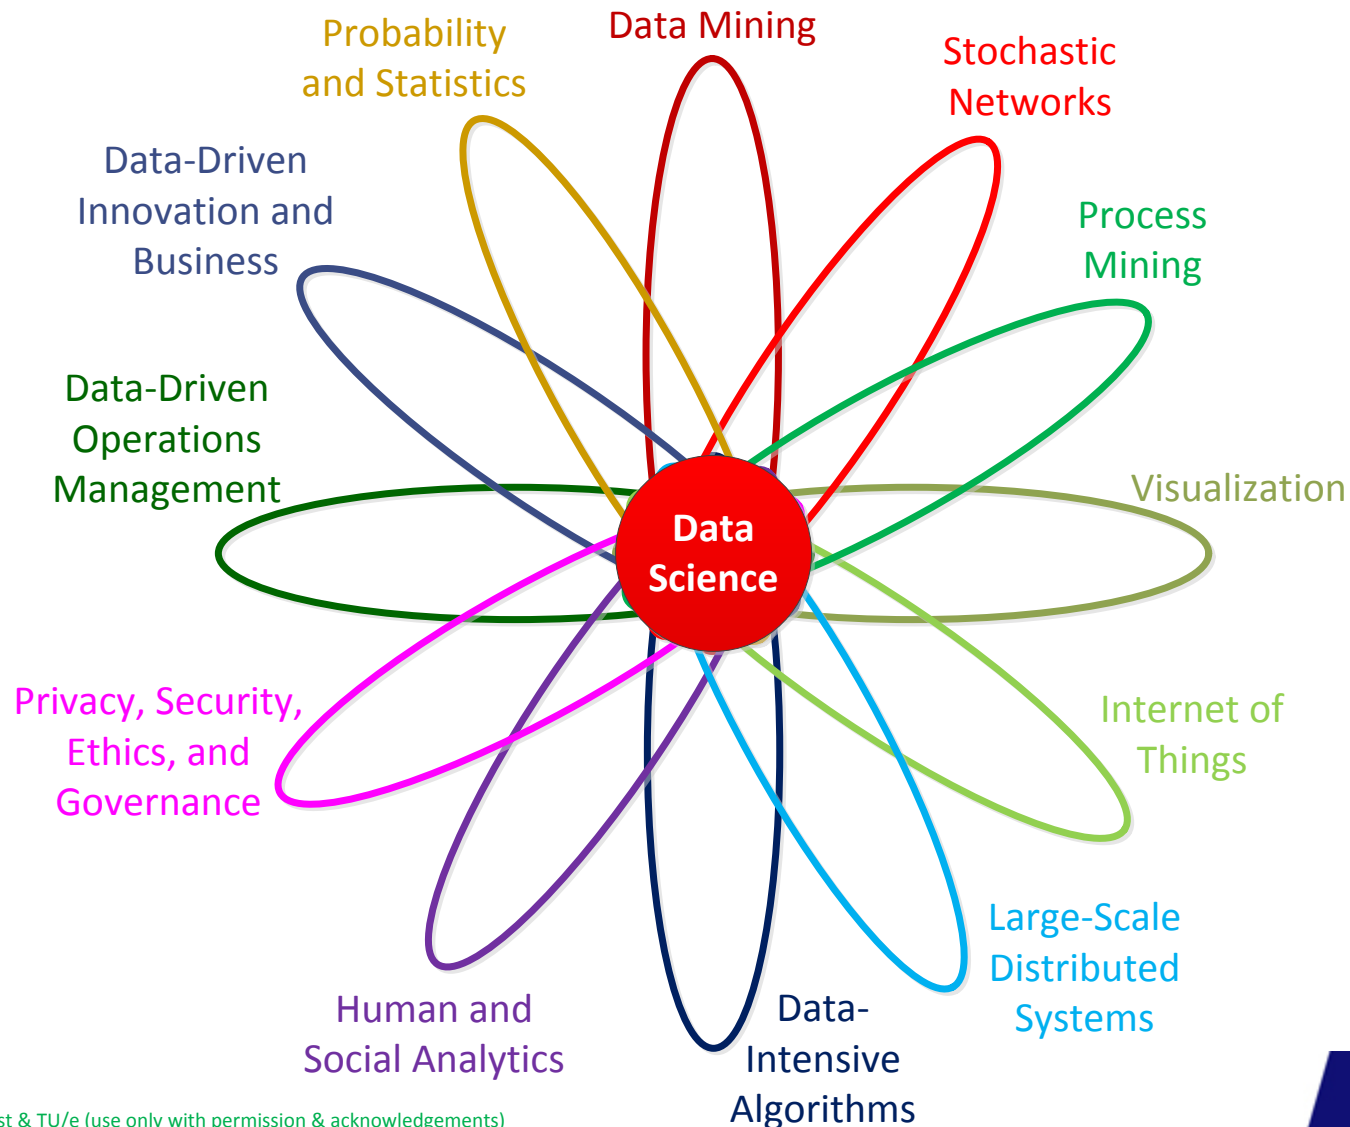

Why and when do X-ray machines malfunction?

Which components should be replaced?

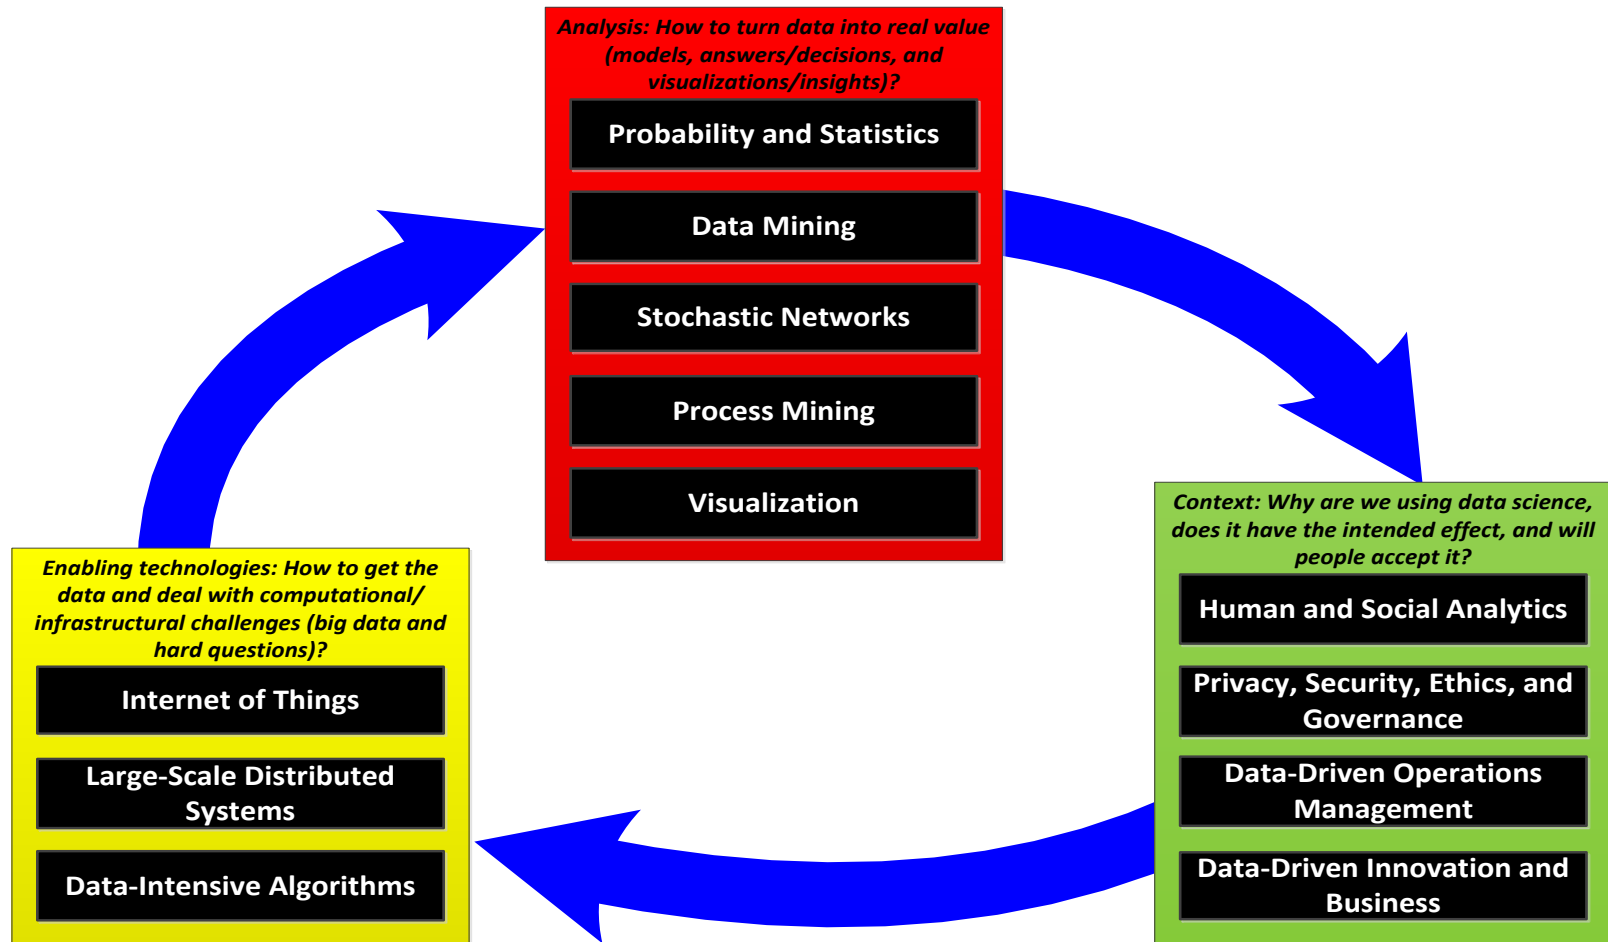

Which parts need to be improved?

**from the organizational level
to the hardware/software level**

Data science skills needed to answer such questions

DSC/e 2014

THE **process** SCIENTIST IS A NEW BREED

©Marion van de Wiel 2014

DSC/e 2014

A cartoon illustration depicting a scientist's desperate search for data. In the foreground, a large, balding man with a grey beard and a single eyepatch looks up with a desperate expression. His open mouth reveals a chaotic jumble of data symbols, including a DNA double helix, molecular structures, and various charts. He is reaching out with his hands towards a small, frantic man in the background. The small man, wearing a green shirt and blue pants, is digging with a shovel on a yellow patch of ground, surrounded by discarded papers and debris. In the background, a shelf holds various laboratory glassware like flasks and beakers. The scene is set in a brown, earth-like environment.

More...More...
I need more data!

If I miss one day without feeding him with data,
then I am in trouble...!

The principles of process management

1. All work is process work.
2. Any process is better than no process.
3. A good process is better than a bad process.
4. One process version is better than many.
5. Even a good process must be performed effectively.
6. Even a good process can be made better.
7. Every good process eventually becomes a bad process.

Michael Hammer. What is Business Process Management? Handbook on Business Process Management 1, Springer Verlag, 2010

A person is rappelling down a rope from the edge of a cave. The cave's interior is dark and rocky, while the opening reveals a bright, scenic view of a coastline with mountains and the sea. The person is wearing a harness and a helmet, and is positioned in the upper left quadrant of the frame. The text "process scientist" is overlaid on the right side of the image.

**process
scientist**

fun and challenging

**needs to have the
right tools**

About the DSC/e

Find out how the DSC/e is organized

People, organizations, and systems are generating torrents of data. These growing data volumes provide exciting opportunities but also induce new "big" challenges. To turn data into real value, scientific breakthroughs are needed, e.g., in the area of data analytics. Collaborative efforts of various scientific communities ranging from computer science and mathematics to electrical engineering and social science, end-user organizations, and system developers are needed to realize these breakthroughs. Therefore, TU/e has launched the Data Science Centre Eindhoven.

(DSC/e). The DSC/e strives to be an internationally leading expertise center when it comes to data science research and education. Research focuses on developing new insights (models, theories, tools) to be able to add and extract value from real sets of heterogeneous data. Education focuses on the skills and scientific knowledge most relevant for tomorrow's data scientist. The DSC/e will operate in close collaboration with other stakeholders and will make optimal use of its geographical location in the Brainport region.

News

DSC/e Lecture Series starts in September 2014

10 June 2014

The DSC/e organizes several interesting lectures about the various aspects of Data Science.

'War on talent': Philips gaat promotieplekken TU Eindhoven betalen

Door: Jurriaan Nolles - 04/06/14, 06:54

© RAYMOND RUTTING / DE VOLKSKRANT. Studenten bij de TU Eindhoven.

Philips gaat dertig promotieplekken op de Technische Universiteit (TU) van Eindhoven financieren. Het bedrijf doet dit omdat er in de sector grote behoefte is aan nieuw talent. Topman Henk van Houten noemt het een volgende stap in 'the war on talent'.

Het is niet nieuw dat grote bedrijven als Philips, AkzoNobel of ASML geld in universitair onderwijs steken. Het is echter voor Philips wel de eerste keer dat het zo'n grote groep promovendi in één keer financiert. Philips heeft al promovendi (ongeveer tien) op universiteiten rondlopen, maar dat zijn individuele wetenschappers. Ook zijn werknemers van Philips te vinden op andere posities aan de universiteit: sommigen bekleden er één dag per week een leerstoel.
